SUMMARY

Results-driven Software & AI Engineer with experience building full-stack applications and AI-powered systems across defense, edtech, and startup environments. Skilled in agentic AI architecture (LangGraph, RAG pipelines), LLM integration, and React/Node.js full-stack development. Seeking to apply AI systems expertise to high-impact product teams.

TECHNICAL SKILLS

Technologies:	Python, JavaScript, Java, C#, SQL, React, Node, MongoDB, Docker, Kubernetes, Claude, Cursor, Copilot
AI/ML:	Prompt Engineering Techniques, TensorFlow, PyTorch, Scikit-Learn, LangSmith, LangGraph, LLM APIs, NLP
Certifications:	AWS Certified Cloud Practitioner, Certified Data Analyst
Other:	Data Visualization, System Design, Full-Stack Development, Report Generation, Technical Communication
Project Mgmt:	Agile, JIRA, Fit Gap Analysis, PRD/CDRL generation, Schedule management, Risk management, Office
Coursework:	Contemporary Technology Management, Project Management in Organizations, Networking

PROFESSIONAL EXPERIENCE

Software Engineer, HEIRMEIOS	Jan 2026 - May 2026
- Orchestrated 5 specialized agents, reducing manual application prep time by ~1 hour per job. - Improved output relevance by 40% vs. prompt-only baseline measured via LLM-as-Judge eval harness and RAG. - Scored resume bullets across 3 axes (relevance, specificity, keyword alignment) on 200+ samples. - Enabled autonomous research across millions of company signals with zero human input using Tavily. - LLM token usage reduced by 30% through prompt compression and meta prompting techniques.	
Software Engineer, EDQUILL	May 2025 - Aug 2025
- Shipped 3 Full-Stack AI features across AngularJS/PHP serving 1,000+ student users. - Reduced essay evaluation turnaround from ~3 min to under 10 seconds (94% reduction) via real-time NLP API. - Built 4 dashboard components visualizing LLM-scored metrics across 6 rubric categories. - Reduced load time from 3s to 1.2s (54%) by utilizing Lazy Loading techniques for scalability.	
Software Engineer, AEROBOTICS7	May 2022 - Aug 2022
- Built drone control UI supporting 6-axis navigation with <200ms command response latency. - Trained 4 denoising models across 2 sensor modalities (LiDAR and Sonar), achieving 98% accuracy on test sets. - Reduced noise in datasets by 80% through pruning and quantization techniques.	

PROJECTS | [GITHUB](#)

3D Avatar Generation	May 2026
- Designed and shipped 8+ Figma-to-React UI screens for GenAI avatar customization. - Reduced average model inference latency to under 800ms via Fal.AI API integration.	
Fake News Detection	May 2026
Predictive ML using BERT. Fine-tuned achieving 91% classification accuracy across a 20K-article dataset.	
Portfolio Website	May 2026
MERN-Stack project displaying 3 sections of my portfolio – Software, Photography, and Music.	
Game Developer / Project Manager – MONOCHROME	Jan 2025
Managed 5 developers and helped build combat, map, systems, story, and music elements in C#.	

EDUCATION

B.S. in Technology Management, TEXAS A&M UNIVERSITY	College Station, Texas
- Minor: Cybersecurity, Business - Global Study Abroad Program: Yonsei University, Seoul, South Korea
